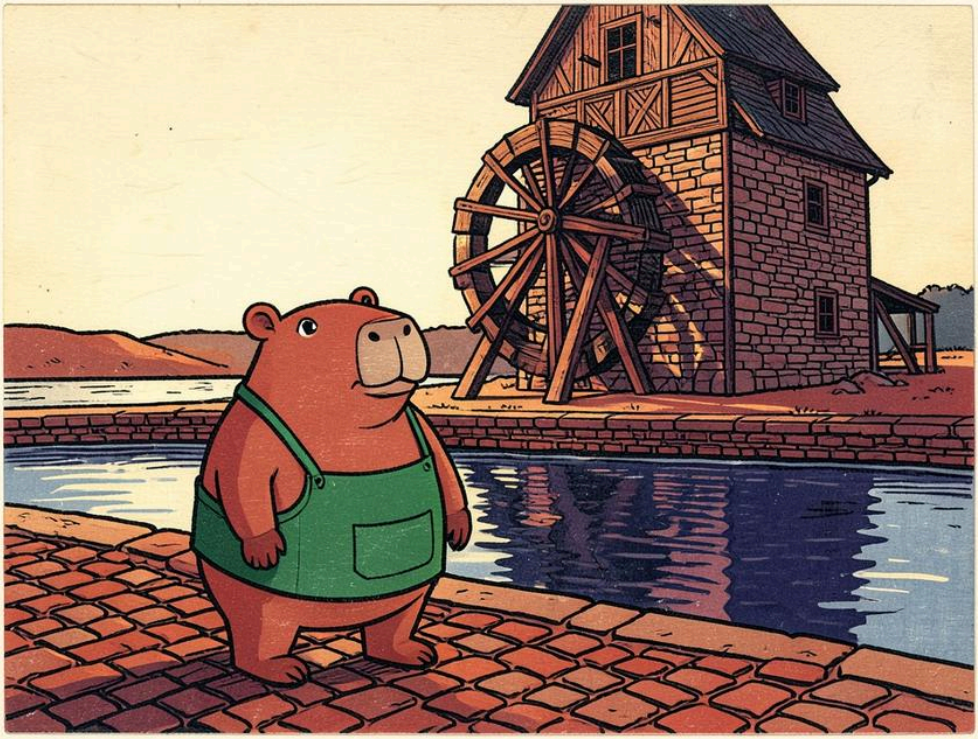
CLEM AND THE OLD MILL

FundOpsHQ

A story about fixing up a building

This book belongs to

_____



Clem the capybara ran a small fund that bought buildings. Animals who were saving for later put their money in, and Clem's job was to make the buildings better.

One spring she found the old mill by the river. Its roof leaked, its windows were cracked, and every room inside was empty.

An empty building earns no rent, so the mill cost much less than a full one. Buying a tired building, fixing it up and filling it is called value-add.

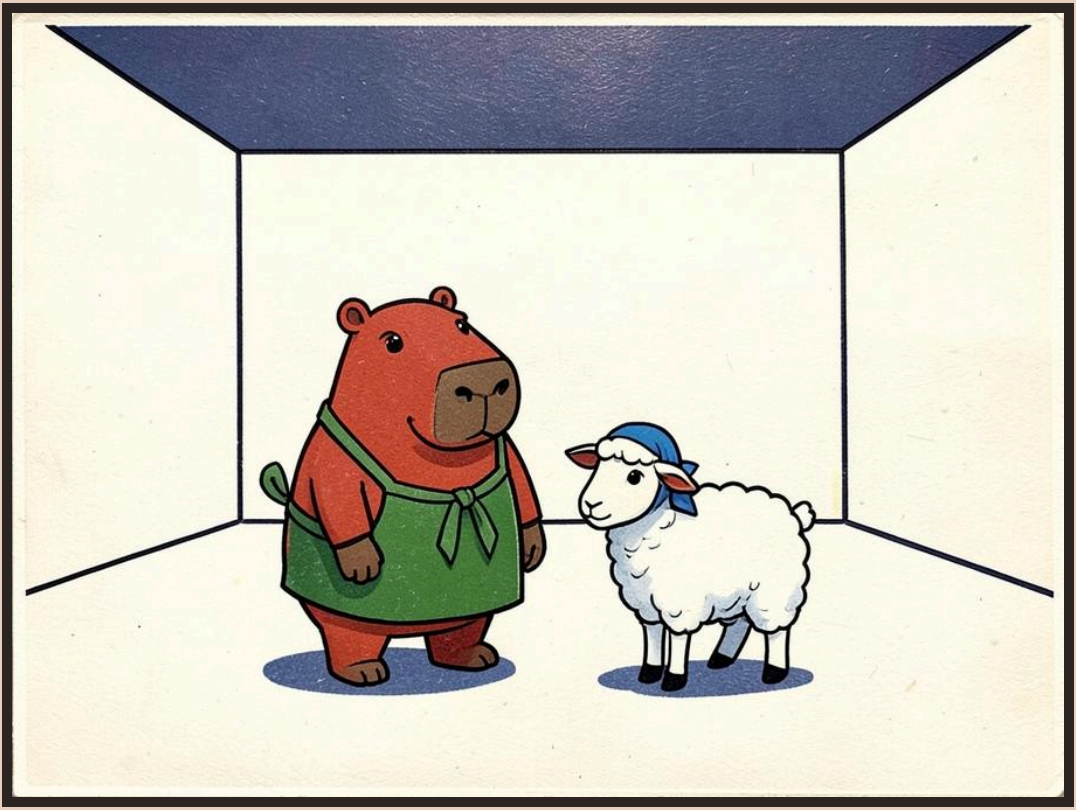
Clem paid for part of the mill with her investors' money and borrowed the rest from a bank. The fund paid interest every month, even while the mill stood empty.

Then the work began: a new roof first, then new windows, then warm wooden floors. Clem planned for it all to take one year.

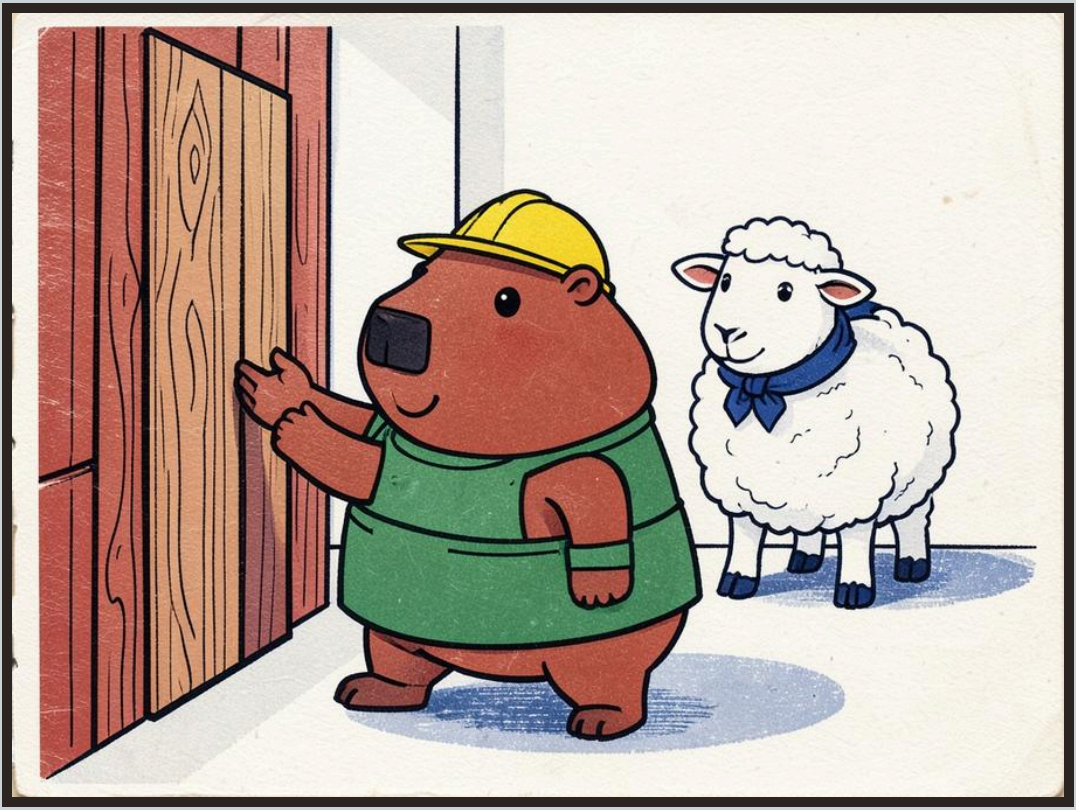
But under the old floor, the builders found that the big beams had rotted. Mending them would take three more months and cost more than she had planned.

Clem had planned for a surprise. She had kept some money aside for one, so the work could go on and the bank could still be paid each month.

By the next summer, the mill was dry and bright. Now it needed tenants: animals who would rent its rooms and pay each month.



At first, nobody signed. Wynn the weaver loved the big room by the water wheel, but it was too big for her loom, and the rent was more than she could pay.



So Clem built a wall down the middle and made two smaller rooms, each at a smaller rent. Wynn took one for her loom, and she told her friends about the other.

A potter came, then a baker. Soon nine rooms in ten were rented. The rent left after upkeep is called net operating income, and it paid the bank and the investors.

Years later, near the fund's end, Clem sold the mill to a pension fund that wanted steady rent, not a big project. Buyers like that are called core buyers.

The mill sold for more than it had cost to buy and mend. The bank was paid back, and the rest went to the savers. Walking past, Clem heard the loom and smiled.

A NOTE

The words in this book are real ones, explained simply. The animals and examples are made up, and real terms vary from fund to fund. It is not advice. The pictures were drawn with an AI image model and checked by hand.
